SUMMARY

Final-year MSc Business Analytics student at NEOMA with practical skills in Excel, Power BI, SQL, and data analysis. Experienced supporting teams through data preparation, analysis, and creating dashboards to improve business decisions. Seeking an end of study 6-month internship, available from June 2026.

PROFESSIONAL EXPERIENCE

Operations & Inventory Assistant | Hôtel Mercure Paris, France

May 2025 – Sep 2025

- Analysed stock patterns across 500+ SKUs using Excel and pivot models to streamline reorder processes and reduce supply chain disruptions, directly informing inventory decisions.
- Built weekly Excel-based performance reports consolidating multi-department stock and sales data, reducing manual reporting time.
- Collaborated with operations teams to translate business needs into structured data processes, improving traceability of stock.
- Monitored daily inventory across departments, ensuring stock availability throughout peak season.
- Built weekly Excel-based performance reports consolidating multi-department stock and sales data, reducing manual time.

Business Development Representative | Yeti Commerce Kathmandu, Nepal

Jul 2021 – Jan 2023

- Sourced and evaluated 40+ local and international vendors through structured market research and Excel-based scoring models, expanding the product catalogue by 35%.
- Conducted competitor pricing analysis in Excel, identifying gaps and proposing data-driven recommendations that improved average order value by 12%.
- Built and maintained dashboards and reporting templates to track B2B/B2C channel KPIs, delivering performance insights.
- hands-on exposure to e-commerce growth dynamics in an emerging digital market, developing a strong understanding of both vendor supply-side and customer demand-side data.

Data & Research Intern | Ashman Foundation Delhi, India

Oct 2019 – Apr 2020

- Collected and consolidated field research data across multiple programme sites using structured Excel templates, ensuring consistency and accuracy for analysis.
- Prepared 10+ summary reports and visual dashboards to present findings to NGO partners and senior management.
- Formulated data-driven recommendations from research findings that directly informed programme strategy, presenting insights to senior stakeholders.

PROJECTS

Global Tech Layoff Analysis | End-to-end Python pipeline (Pandas, Seaborn, Plotly) analysing global tech layoffs across 50+ countries via 7+ interactive visualisations. Covers full EDA, data cleaning, time-series analysis, and geographic distribution.

ESG & Financial Risk Analysis — Automotive | Data science case study on Tesla, Ford & Volkswagen (2021–2024). Analyses financial ratios, forecasts 2025–2026 performance via Linear Regression, and uncovers a -0.98 correlation between ESG risk and profitability.

Customer Behaviour Analysis | End-to-end analytics workflow using Python, SQL, and Power BI. Covers data cleaning, customer segmentation, KPI analysis, and interactive dashboards to support data-driven business decisions.
